Analysis

WHAT IS HIRE AI ?

HireAI is a recruitment intelligence platform that automates hiring data collection, AI-based requirement extraction, and recruitment analytics.

The system gathers public hiring information from platforms like LinkedIn, Naukri, and Indeed using automation tools.

It transforms raw hiring data into meaningful business intelligence through dashboards and reports.

PROBLEM STATEMENT

Existing Problems

- Manual recruitment analysis is time-consuming
- Difficult to track hiring trends
- Job descriptions are unstructured
- Recruiters lack centralized hiring intelligence
- Market analysis requires manual effort

Proposed Solution

HireAI automates hiring intelligence using:

- AI
- Automation
- Analytics
- Data Visualization

OBJECTIVES OF HIREAI

- **Automate hiring data collection**
- **Extract job requirements using AI**
- **Analyze hiring trends**
- **Provide recruiter intelligence**
- **Generate professional reports**
- **Improve recruitment decision-making**

System Architecture

FRONTEND ANALYSIS & BACKEND ANALYSIS

Frontend Analysis

Frontend Technologies

- React 18
- Vite
- TypeScript
- Tailwind CSS
- Recharts

Frontend Features

- Interactive dashboard
- Analytics charts
- Search & filtering
- Report generation
- Responsive UI

Backend Analysis

Backend Technologies

- Django 5
- Django REST Framework
- Simple JWT

Backend Responsibilities

- API management
- Authentication
- AI integration
- Analytics processing
- Security handling
- Background tasks

AUTHENTICATION SYSTEM

Security Flow

User Login/Register

OTP Verification

JWT Token Generation

Secure Session Access

Features

- MFA
- OTP verification
- JWT tokens
- Token rotation
- Rate limiting

AI REQUIREMENT EXTRACTION AI PROCESSING

AI Processing

The AI extracts:

- skills
 - technologies
 - experience
 - job roles
- from unstructured
job descriptions.

AI Providers Used

- OpenAI GPT
- Google Gemini
- Heuristic
fallback

HIRING DATA COLLECTION

Automated Data Collection

The project collects public hiring data from:

- LinkedIn
- Naukri
- Indeed

Technology Used

- Playwright Automation
- Dynamic Search
- Celery Background Jobs

Benefits

- Reduces manual work
- Faster hiring, intelligence gathering
- Real-time updates

DASHBOARD & ANALYTICS

Dashboard Features

- Hiring KPIs
- Hiring trends
- Technology demand
- Recruiter intelligence
- Company analytics
- Source effectiveness

Visualization

Interactive charts and graphs are used for data analysis.

RECRUITER INTELLIGENCE

Recruiter Information Stored

- Company details
- Recruiter profiles
- LinkedIn links
- Hiring performance
- Recruiter analytics

APIs Used

- Apollo
- CompanyEnrich

Security

All API keys remain server-side for protection.

REPORTING SYSTEM

Export Features

Reports can be exported as:

- PDF
- Excel
- CSV

Benefits

- Stakeholder sharing
- Professional documentation
- Recruitment analysis
- Business reporting

SECURITY FEATURES

Major Security Features

- MFA Authentication
- OTP Expiration
- Token Blacklisting
- Rate Limiting
- Secure API Keys
- HTTPS Support
- CORS Restrictions

Importance - Ensures enterprise-level application security.

ETHICAL & LEGAL GUIDELINES

Ethical Principles

- Use public data only
- Respect robots.txt
- Avoid sensitive data collection
- Prevent spam automation
- Maintain human review

Importance - Ensures legal and responsible data usage.

FUTURE ENHANCEMENTS

Future Scope

- AI candidate matching
 - Vector database integration
 - AI chatbot assistant
 - Real-time alerts
 - Multi-tenant SaaS platform
 - Global hiring sources
- 

CONCLUSION

HireAI is a modern recruitment intelligence platform that combines:

- AI
- Automation
- Analytics
- Security

The system automates hiring data collection, AI requirement extraction, recruiter intelligence, and reporting workflows.

It demonstrates real-world implementation of:

- Full Stack Development
- Artificial Intelligence
- Distributed Processing
- Business Intelligence Systems
